BIOMETRIKA

FOUNDED BY
W. F. R. WELDON, FRANCIS GALTON AND KARL PEARSON

MANAGING EDITOR
E. S. PEARSON

ASSOCIATE EDITORS
M. G. KENDALL JOHN WISHART

in consultation with
HARALD CRAMÉR R. C. GEARY
J. B. S. HALDANE

VOLUME 40

1953

ISSUED BY
THE BIOMETRIKA OFFICE, UNIVERSITY COLLEGE, LONDON
PRINTED AT THE UNIVERSITY PRESS, CAMBRIDGE

PRINTED IN GREAT BRITAIN

CONTENTS OF VOLUME *40*

Memoirs

		PAGES
I.	The superposition of several strictly periodic sequences of events. By D. R. Cox and W. L. Smith. With four Figures in the Text	1—11
II.	Approximate confidence intervals. By M. S. Bartlett	12—19
III.	Incomplete and absolute moments of the multivariate normal distribution with some applications. By A. R. Kamat	20—34
IV.	On the range of partial sums of a finite number of independent normal variates. By A. A. Anis and E. H. Lloyd	35—42
V.	Note on 'the Jacobians of certain matrix transformations useful in multivariate analysis'. By Ingram Olkin	43—46
VI.	Estimation of a functional relationship. By D. V. Lindley	47—49
VII.	Estimating parameters in truncated Pearson frequency distributions without resort to higher moments. By A. C. Cohen, Jr.	50—57
VIII.	A problem of interference between two queues. By J. C. Tanner	58—69
IX.	Tables of the angular transformation. By W. L. Stevens	70—73
X.	Tests of significance in a 2×2 contingency table: extension of Finney's table. Computed by R. Latscha	74—86
XI.	A method for judging all contrasts in the analysis of variance. By Henry Scheffe	87—104
XII.	The estimation and comparison of strengths of association in contingency tables. By A. Stuart	105—110
XIII.	A sequential test for randomness. By P. G. Moore. With one Figure in the Text	111—115
XIV.	On the mean successive difference and its ratio to the root mean square. By A. R. Kamat	116—127
XV.	The effect of unequal group variances on the F-test for the homogeneity of group means. By G. Horsnell. With two Figures in the Text	128—136
XVI.	The estimation of population parameters from data obtained by means of the capture-recapture methods. III. An example of the practical applications of the method. By P. H. Leslie, Dennis Chitty and Helen Chitty. With one Figure in the Text	137—169
XVII.	On the utilization of marked specimens in estimating populations of flying insects. By C. C. Craig	170—176

PAGES

XVIII. The total size of a general stochastic epidemic. By NORMAN T. J. BAILEY. With three Figures in the Text . . . . . 177—185

XIX. Experimental evidence concerning contagious distributions in ecology. By D. A. EVANS. With four Figures in the Text . 186—211

XX. The population frequencies of species and the estimation of population parameters. By I. J. GOOD . . . . . 237—264

XXI. Capture-recapture analysis. By J. M. HAMMERSLEY . . . 265—278

XXII. The use of chain-binomials with a variable chance of infection for the analysis of intra-household epidemics. By NORMAN T. J. BAILEY . . . . . 279—286

XXIII. Spread of diseases in a rectangular plantation with vacancies. By G. H. FREEMAN. With two Figures in the Text . . . . 287—296

XXIV. Tests of significance for concurrent regression lines. By E. J. WILLIAMS . . . . . 297—305

XXV. Approximate confidence intervals. II. More than one unknown parameter. By M. S. BARTLETT . . . . . 306—317

XXVI. Non-normality and tests on variances. By G. E. P. BOX. With two Figures in the Text . . . . . 318—335

XXVII. Approximating to the distributions of measures of dispersion by a power of χ^2. By J. H. CADWELL . . . . . 336—346

XXVIII. The power function of some tests based on range. By H. A. DAVID 347—353

XXIX. Some simple approximate tests for Poisson variates. By D. R. COX. . . . . 354—360

XXX. Orthogonal polynomial fitting. By JOHN WISHART and THEOCHARIS METAKIDES . . . . . 361—369

XXXI. Population differences between species growing according to simple birth and death processes. By J. H. DARWIN . . . 370—382

XXXII. Modifications to the variate-difference method. By M. H. QUENOUILLE . . . . . 383—408

XXXIII. Moments of the rank correlation coefficient τ in the general case. By R. M. SUNDRUM . . . . . 409—420

XXXIV. 99·9 % and 0·1 % points of the χ^2-distribution. By T. LEWIS . 421—426

XXXV. Tables of symmetric functions. Part IV. By F. N. DAVID and M. G. KENDALL . . . . . 427—446

Miscellanea

		PAGES
(i)	Time intervals between accidents—a note on Maguire, Pearson and Wynn's paper. By G. A. Barnard	212—213
(ii)	Further notes on the analysis of accident data. By B. A. Maguire, E. S. Pearson and A. H. A. Wynn. With one Figure in the Text	214—216
(iii)	On a method of estimating biological populations in the field. By C. C. Craig. With one Figure in the Text	216—218
(iv)	A rapid method for estimating the correlation coefficient from the range of the deviations about the reduced major axis. By C. H. Leigh-Dugmore	218—219
(v)	The effect of overlapping in bacterial counts of incubated colonies. By C. Mack	220—222
(vi)	Non-normality in two-sample t-tests. By D. G. C. Gronow	223—225
(vii)	Note on the Poisson Index of Dispersion. By N. Kathirgamatamby	225—228
(viii)	On an extension of Geary's theorem. By R. G. Laha	228—229
(ix)	The Doolittle method and the fitting of polynomials to weighted data. By P. G. Guest	229—231
(x)	A simple method of deriving best critical regions similar to the sample space in tests of an important class of composite hypotheses. By K. S. Rao	231—233
(xi)	Review of Gerhard Tintner's *Econometrics*. By J. Durbin	234
(xii)	Review of Acheson J. Duncan's *Quality Control and Industrial Statistics*. By D. R. Cox	234—235
(xiii)	Some procedures for comparing Poisson processes or populations. By Allan Birnbaum	447—449
(xiv)	Scale factors and degrees of freedom for small sample sizes for χ-approximation to the range. By George Wm. Thomson	449—450
(xv)	The third moment of Gini's mean difference. By A. R. Kamat	451—452
(xvi)	A method of systematic sampling based on order properties. By R. M. Sundrum	452—456
(xvii)	A note on ordered least-squares estimation. By F. Downton	457—458
(xviii)	A note on the evaluation of the multivariate normal integral. By F. N. David	458—459
(xix)	A graphical method for the analysis of statistical distributions into two normal components. By Eric J. Preston. With one Figure in the Text	460—464
(xx)	A note on regions for tests of kurtosis. By G. E. P. Box. With two Figures in the Text	465—468

PAGES

(xxi) The frequency justification of sequential tests—addendum. By G. A. BARNARD . . . . . 468—469

(xxii) Review of O. Kempthorne's *The Design and Analysis of Experiments*. By C. A. MOSER . . . . . 470—471

(xxiii) Review of M. H. Quenouille's *Associated Measurements* and *The Design and Analysis of Experiment*. By D. R. COX . . . 471—472

(xxiv) Review of C. I. Bliss's *The Statistics of Bio-assay* and D. J. Finney's *Statistical Method in Biological Assay* and *Probit Analysis*. By M. J. R. HEALY 473

(xxv) Review of A. Hald's *Statistical Theory with Engineering Applications* and *Statistical Tables and Formulas*. By P. G. MOORE . . 473—474

(xxvi) Review of A. Wald's *Statistical Decision Functions*. By G. A. BARNARD . . . . . 475—477

(xxvii) Review of *Applied Mathematics Series*, Nos. 11, 14, 21, 25 and 26, of the National Bureau of Standards, U.S. Department of Commerce. By H. O. HARTLEY . . . . . 477—478
